repromed

Welcome to
Repromed

At Repromed, our goal is to do whatever we can to help you realise your dream of having a child. Repromed is a medical facility specialising in assisted reproductive technology (ART) and is highly respected worldwide for its quality of care and innovative procedures. Almost 95% of South Australians undertaking ART treatment choose to use Repromed for their care.

Around one in six couples is affected by infertility with many and varied causes. We believe in treating each couple individually and personally, according to their needs and circumstances.

Reasons for infertility

Many couples plan carefully to ensure the time is just right to start a family. For the majority of couples, pregnancy occurs naturally within 12 months of trying to conceive. However, up to 20 per cent of couples fail to fall pregnant or achieve pregnancy only to miscarry.

Infertility is defined as the inability to conceive after a year of unprotected intercourse, or the inability to carry pregnancies to a live birth.

There are many possible causes of infertility among males and females:

- 30% of infertility is due to female factors alone
- 30% of infertility is due to male factors alone
- 30% of infertility is due to both female and male factors
- Up to 10% of infertility remains unexplained

There may also be male or female genetic factors that affect an embryo's ability to develop causing infertility or repeated miscarriage.

Services

Repromed offers ART treatments including:

- Fertility assessment / investigation
